

## Disposable Masks

Locations and tasks require a variety of different solutions when it comes to the health and safety of both staff and customers. With the launch of three disposable face masks we can offer a solution whatever the situation.

All of our masks are at least 3 ply where the central layer is made of melt-blown material underwriting the BFE (Bacterial Efficiency Level), all of the masks have a minimum filtration level of 90%

The disposable option gives a uniform appearance to your team, guaranteeing hygiene. Reusable masks cannot deliver this hygiene assurance, it is comparable to the use of handkerchiefs and paper tissues.

We must focus on instilling confidence in a very visible way.

This mask is designed for general use, it is not suitable for medical use.

The mask is made of three layers of material, the outer layers are non woven material and the central layer is melt-blown fabric with a BFE  $\geq 90\%$   
The mask holds GB/T 32610 accreditation, confirming its quality and suitability for use.

The mask should be discarded after use

V10000  
3 Ply General Use Mask (White)  
40 boxes of 50

This mask is a Type 1 Medical Mask and holds EN14683:2019

The mask is made of three layers of material, the outer layers are non woven material and the central layer is melt-blown fabric with a BFE  $\geq 95\%$ .

Whilst this mask affords more protection than the General Use mask it is not the grade that is specified by the NHS (Type IIR) for use in hospitals during this pandemic.

This mask is suitable for use in care homes but not a hospital environment.

The mask should be discarded after use

V20001  
3 Ply Medical Type 1 Mask (Blue)  
40 boxes of 50

This style of mask is ideal when people want an extra layer of protection. The KN95 mask fits closely to the face so that air cannot pass the edges of the mask achieving very efficient filtration of airborne particles.

The mask is individually bagged and is made of 4 layers, including two layers of meltblown fabric, giving a BFE of 95%

The mask holds GB2626:2006 accreditation which is the equivalent of EN149:2001+A1 2009

The mask should be discarded after use.
