

One handle fits all with the Robert Scott Hygiene handle

With a universal screw fitting, the Hygiene handle can be used with practically every cleaning tool, including push-fit, collar grip and, of course, screw-fit sockets. This means you can sweep, mop and squeegee without the hassle of stocking different handles for different jobs.

How to fit a Hygiene handle to an Exel® socket mop

The Exel push-fit socket features internal ridges, which are designed to take the thread of the Hygiene handle. This means the Hygiene handle fits both screw and push fittings.

To fit, push the Hygiene handle into the Exel socket and, while applying firm pressure, screw the handle clockwise until tight. The handle will screw its own thread into the socket.

To remove, place the mop head on the floor, preventing it from moving by placing a foot on the yarn, and simply unscrew in an anticlockwise direction.
