

Top Performance – A New Level of Washing Efficiency

The PT Series – a new generation of Winterhalter pass-through dishwashers – sets the market standard. It delivers brilliant washing results, offers superior speed and guaranteed economy.

Simply Brilliant

Always delivers brilliant washing results thanks to:

VarioPower

- By selecting a wash programme, the wash water pressure automatically adjusts to suit the items being washed and the degree of soiling
- Brilliant results whilst maintaining the optimal condition of the items being washed

Adjusting other elements of the wash process

- Depending on the selected programme, time, temperature, detergent and rinse aid dosing are all accordingly adjusted

Elliptical wash fields

- Maximum coverage washing facilitated specially arranged jet geometry
- Brilliant wash results that reach every corner of the machine

Full-flow filtration

- 100 % of the wash water is filtered
- The centrifugal force of the Mediamat removes the finest contaminants such as coffee grounds
- The quality of the wash water is monitored by a clouding sensor which initiates automatic regeneration when required

Superior Speed

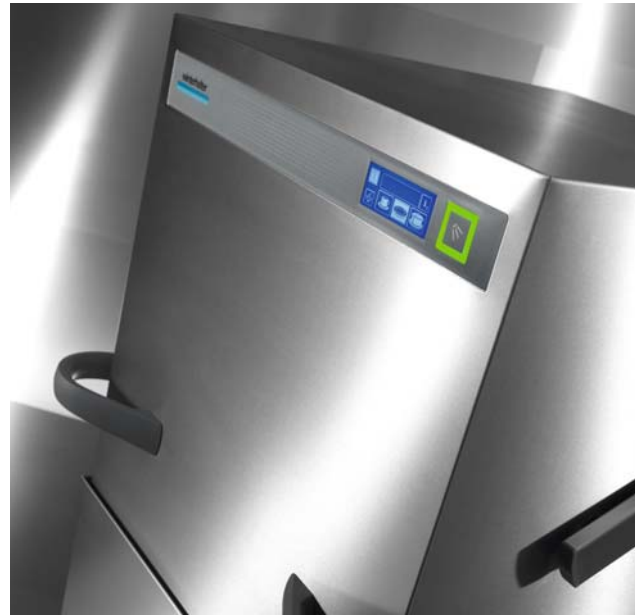

Perfect wash results in the shortest time through:

Active energy management

- Reduced wash times and resultant improved rack throughput of up to 28 % per hour
- Ready for operation much faster because heatup time is reduced by up to 50 %

EnergyLight waste water heat exchanger

- Faster heating of the rinse water through continuous pre-heating of the inlet water, which delivers a time saving of up to 26 %
- Reduction in waiting times so continuous rack feed washing is possible

Guaranteed Economy

Protects resources and saves energy through:

EnergyLight

- Pre-heating of the cold supply water thanks to standard waste water heat exchanger
- Reduction in energy costs of up to 10%

EnergyPlus (optional)

- Pre-heating of the cold supply water thanks to a combination of waste water heat exchanger and exhaust air heat recovery system
- Reduction in operating costs of up to 20% per wash cycle
- In some circumstances an additional exhaust air extraction hood is not required – because the exhaust air temperature is reduced by more than half*

Magnet-driven rinsing system (optional on PT-L, PT-XL)

- Minimal water consumption facilitated by magnetic drive during rinsing
- Less detergent, rinse aid and energy consumption
- Reduction in operating costs by approx. 12%

Maximum efficiency

- Combination of EnergyPlus and magnet-driven rinsing system reduces operating costs by up to 32%

* Please observe the current directives for ventilating and air extraction in kitchens.

Incredibly Easy

Simple and intuitive operation through:

Touchscreen

- Language-neutral and self-explanatory operation
- Choice of three standard programs and additional special programs (e.g. short or eco programs) selected by touching the corresponding symbol
- The program is started with a colour-coded single button control with progress indicator or starts automatically upon closing the hood

Control functions

- Rapid recognition of machine warnings through visual and acoustic signals, e.g. blocked washing fields, low detergent and rinse aid levels
- PIN-protected head chef level: Access to the operating and hygiene logs that record wash characteristics and malfunctions

User-friendly operation and hygienic design

- Eye-level display for convenient operation
- Ergonomic cover grips and optional automatic hood opening for greater ease of use
- On/off timer control
- Deep tank, hygienic rear wall and automatic self-cleaning programme for easy internal cleaning of the machine
- Sustainably improved room climate as a result of minimised emission of steam with EnergyPlus
